

Project Atlas: The Financial OS for Cross-Border Mid-Market and SMB Businesses

getatlasos.com

OVERVIEW

Project Atlas is an AI-native, hybrid rail, financial OS for "micro-multinationals": dev shops, remote-first SaaS companies, global agencies, and high-growth importers/exporters that earn in USD but pay teams and suppliers across LatAm, Eastern Europe, and Asia.

These businesses face structural liquidity pain: 5–15-day SWIFT delays, 3–5% effective FX drag, and almost no access to receivables-backed or revenue-based cross-border financing. Atlas uses stablecoin rails (USDC) and AI agents to give them instant inbound and outbound liquidity on cross-border B2B flows.

We leverage stablecoin-settled rails to completely bypass legacy banking delays, achieving instant **T+0 settlement** compared to the traditional, fragmented **T+3** (or worse) SWIFT standard. Atlas effectively monetizes three distinct products in a single automated flow: Global Compliance (MoR), Private Credit (Lending), and Enterprise Resource Planning (ERP/SaaS). Our highly automated architecture yields a 6.0–7.0% take rate while operating at 11x the efficiency of traditional cross-border lenders.

1. THE OPPORTUNITY: THE RISE OF THE MICRO-MULTINATIONAL

The global business landscape has fundamentally shifted from regional to functionally global. Today, exporters, importers, high-margin digital services, software development, and specialized agencies operate across borders and are increasingly decoupled from geography. This has given rise to the **micro-multinational**: a lean, borderless mid-market or SMB business that generates top-tier economic value across multiple jurisdictions.

However, the financial infrastructure has not adapted. These micro-multinationals are fundamentally **cross-border native**, yet they are treated as high-risk, unbankable entities by local financial institutions and largely ignored by US mega-banks. This creates a massive, entirely unserved market of businesses that have verified US and international revenue, but limited access to financing and efficient cross-border money movement.

2. THE PROBLEM

Micro-multinationals are under-served by both local banks and US-centric fintechs:

- **US invoices on Net-30/60**, with no ability to easily finance receivables or future revenue across borders
- **Cross-border SWIFT transfers** that take 5–15 days, with opaque fees and 3–5% all-in FX drag
- **Local banks** that cannot underwrite US-denominated receivables and see cross-border entities as high-risk
- **Fragmented tools**: one provider for FX, another for cards, another for accounting, and manual reconciliation across currencies and entities

The result: constant payroll stress, constrained inventory capital, and inefficient use of working capital.

3. THE ATLAS SOLUTION

Atlas is a financial OS that turns US invoices and future revenue into instant liquidity and seamless cross-border payments, powered by USDC rails and autonomous AI agents.

Core Capabilities

- **Instant Liquidity:** Factor US invoices and offer revenue-based financing on future revenue, so customers don't wait weeks for cash
- **Smarter rails:** Fiat in → USDC through → local payouts and Visa cards out, compressing settlement from T+5–15 to near-instant while reducing FX drag
- **Automated operations:** AI agents handle MoR compliance, AML, tax workflows, credit underwriting, treasury yield, and ERP reconciliation (via Codat and ISO 20022), so finance teams get a single, automated OS

4. HYBRID RAIL ARCHITECTURE

Atlas is built on a hybrid rail stack that combines regulated banking, stablecoin orchestration, and global card rails.

- **Lead Bank (FBO):** FDIC-insured custody and fiat on/off-ramps in the US.
- **Bridge + Circle USDC:** Fiat↔USDC conversion, smart contract routing, and cross-border stablecoin settlement.
- **Rain (Visa-principal laaS):** Atlas leverages Rain's Visa principal membership to issue cards and capture full issuer interchange.
- **Atlas AI + Codat:** On ledger ingestion, AI-driven Credit, Compliance, Treasury, and Reconciliation agents, with deep ERP/ISO 20022 integrations.

5. USER EXPERIENCE

US buyer pays invoice in fiat → Atlas converts to USDC via Circle + Bridge → routes cross-border → pays out to local bank accounts and Rain-issued Visa cards, or holds in a USDC-based treasury, all abstracted behind Atlas's UI.

- **The Closed Loop Data Advantage:** Because the Compliance Agent sees the cross-border contract and the Reconciliation Agent sees the bank account, the Atlas Credit Agent has "God Mode" visibility.
- **The Sticky Ledger:** Atlas Ledger ingestion, AI-driven credit, compliance, treasury, and reconciliation agents, with deep ERP/ISO 20022 integrations.

6. THE ATLAS REVENUE FLYWHEEL

The Atlas revenue flywheel assumes a micro-multinational customer outsources its full financial stack to Atlas. Below is the illustrative value capture on a **\$100k cross-border transaction**:

Component	Agent Action	Revenue Logic	Atlas Take
1. MoR/Compliance Fees	Compliance Agent and MoR assumes full liability. Handles cross-border VAT, tax filing, and FX.	3.0% of MoR volume	\$3,000
2. Factoring and RBF Fees (2.0% and 6.0%)	Credit Agent instantly advances \$50k. Risk is near-zero (Atlas controls the cross-border inbound \$100k).	2.0% Origination/Factor Fee (on the \$50k advance)	\$1,000

Component	Agent Action	Revenue Logic	Atlas Take
3. FX Spread	User does a cross-border FX transfer of \$50k into local currency via the Atlas platform.	1.5% FX spread	\$750
3. Card Interchange	User spends \$20k globally via the Atlas Corporate Card. Atlas captures network interchange.	1.5–2.0% Interchange (Standard commercial premium on \$20k)	\$400
4. Treasury Yield	Treasury Agent aggressively manages the \$30k float in DeFi/RWAs before the user withdraws it locally.	1.0–1.5% Spread (Annualized yield captured over hold period)	\$350
5. SaaS Platform Fees Basic, \$200/mo Pro, \$1,000/mo	Reconciliation Agent closes the books, syncing complex cross-border data back to the user's ERP.	1.0% Platform/SaaS Fee (Allocated per transaction)	\$1,000
TOTAL	Compliance + Credit + Banking + Accounting for the Micro-Multinational.	6.0–7.0% Blended Total Take Rate	\$6,500

7. FINANCIAL PROJECTIONS

Atlas Revenue Projections (\$ in millions, except user data)			
	Year 1	Year 2	Year 3
SaaS Platform Revenue	\$0.2	\$0.8	\$3.2
Fintech Revenue	3.6	17.4	55.3
Total Revenue	\$3.8	\$18.3	\$58.4
<i>Growth</i>		383.9%	220.2%

Atlas Financial Projections (\$ in millions, except user data)			
	Year 1	Year 2	Year 3
Active Users	70	225	700
MoR Volume	\$60.5	\$259.2	\$806.4
Total Revenue	\$3.8	\$18.3	\$58.4
Effective Take Rate	5.9%	6.7%	6.9%
Gross Margin	79.0%	78.3%	79.7%
EBITDA	(\$0.1)	\$8.7	\$30.4
EBITDA Margin	(3.2%)	47.7%	52.0%

Gross margin is projected to expand from 79% in Year 1 to approx 80% by Year 3 as cost of funds, rail costs, and loss rates improve with scale.

This is the foundation of a 6.0–7.0% take rate business with 80% gross margins. Fortified by our closed loop data moat, Atlas is structurally engineered to become the foundational financial infrastructure for the cross-border micro-multinational.

8. INITIAL PILOTS

A. LatAm Dev Shops and Agencies

Dev shops and agencies in Argentina/Brazil/Mexico selling into the US and paying local teams weekly/monthly.

Use Atlas to: factor US invoices and move funds via USDC into local accounts/cards in time for payroll.

Pilot Targets: T+0 settlement vs SWIFT T+5–15; 150–200 bps FX/bank cost reduction; 10–15-day DSO reduction.

B. Eastern Europe B2B SaaS

SaaS exporters in Poland/Romania with US-denominated revenue and global expenses.

Use Atlas to: hold revenue in USDC, pay vendors/contractors via FX and cards, and automate reconciliation.

Pilot Targets: increasing share of revenue held in USD/USDC, incremental net yield vs bank, reduced close time.

9. TEAM

Emeka Obinna – Founder & CEO

20 years of private equity and investment banking experience at Goldman Sachs (New York), Bear Stearns/JP Morgan (New York), and Standard Chartered Private Equity, with over \$10B of transactions executed and approx \$3B of cross-border M&A and financings. Previously ran a US\$200M PE fund in West Africa, with growth-stage operating experience and deep experience in principal investments, deal execution, and complex cross-border capital flows/structures. Has extensively diligenced the cross-border financing flows and similar bank + stablecoin rails Atlas is using today. Currently leading origination, deal execution, and principal investments at Racecourse Capital Partners.

Roy Rodrigues – Advisor

Seasoned investor and operator with 25+ years of private equity and investment banking experience at Bear Stearns/JP Morgan (New York). Extensive fintech and healthcare background. Previously ran \$500M London-based family office. Notable investments and exits include Episource (\$750M exit to Optum in 2023) and Parachute Health (current; valued at \$700M+ in 2025). Emeka and Roy have known each other for 20+ years, worked together at Bear Stearns/JPM, and co-invested in Episource.

Team Buildout

We are actively hiring a CTO (AI/ERP) and Compliance Lead (cross-border MoR/AML), already interviewing ex-Codat and ex-Ramp engineers for founding roles, and in early conversations with infra partners and experienced cross-border fintech operators to formalize an advisory group.

10. WHY NOW?

1. **Stablecoin infrastructure maturity:** USDC has real B2B liquidity and regulatory clarity in key corridors (US→LatAm, US→Eastern Europe, US→Asia Pacific), driven by real-world B2B and treasury use rather than purely speculative flows.
2. **AI agents unlock automation:** We can now automate credit, compliance, and reconciliation workflows that previously required full back-office teams, enabling much leaner operations than traditional cross-border lenders.
3. **Micro-multinationals are now mainstream:** SMBs and mid-market companies built around distributed teams and cross-border customers are now the norm, especially in software, agencies, and specialized services.
